PROJECTS

Skin Disease Prediction Using Machine Learning
North Western University

🗓 3 Months

- This project predicts the presence of skin disease using machine learning models, including Support Vector Machines (SVM) and K-Nearest Neighbors (KNN). It analyzes the various skin diseases of patients, with pre-processing to ensure accurate results. Visualizations and evaluation metrics such as precision and ROC-AUC highlight the effectiveness of the models, supporting early diagnosis and better decision-making in healthcare.

Voice-Controlled Robot using Arduino Uno
North Western University

🗓 4 Months

- Developed a voice-controlled robot using Arduino Uno, integrating voice recognition technology to control the robot's movement and actions. Utilized voice command processing to enable hands-free operation, demonstrating skills in embedded systems, voice recognition, and robotics, enabling real-time, hands-free control for various robot movements, showcasing proficiency in embedded programming, sensor integration, and automation.

Hotel Management System
North Western University

🗓 2 Months

- Developed a Hotel Management System that automates various tasks such as room booking, check-in/check-out, billing, and reservation management. Utilized a user-friendly interface to streamline hotel operations, demonstrating expertise in database management, software development, and system optimization.
